Dear Sirs,

My Remington 700 malfunctions on a relatively regular basis. (But does not always malfunction) It seems to more ~~var~~ cold weather. It bangs fires sometimes, and others it fails to fire. After I pull the trigger, it will fire on a delayed period of time.

I have examined the spring and cleaned it repeatedly but it hasn't helped.

I often hunt with my friends, and I fear a tragic accident.

A person here in Kodiak was shot in the foot due to rifle malfunction. (Dana Campbell.) He was on a trip to Africa.

Please examine the rifle and repair as necessary.

Sincerely,  
David J. Kine
