Dear Sirs:

Just this week at a gun range did this rifle misfire when loaded and discharged a round. I had chambered the round and when moving from fire position to safety did this occur. My finger was behind the trigger guard. This also occurred last year in darkness and in a tree stand. At that time I thought it might have been my error but after the second incident I investigated the situation and discovered your company has had some problems with certain guns.

I talked with Parts and Repair and they directed that this gun to be sent to you for repairs. Deer season has already begun in coastal South Carolina and my club dues are being wasted without the rifle. I have a hunting vacation planned for Labor Day week and appeal to you to expediate this repair and ship back to me in the quickest method possible.

Regards,

Ken Killough
