

Dear

I called + talked to someone in the Service Dept + they told me to send my rifle + you would test it for me

The Problem

After hunting for several hours with a shell in the chamber

I was going to unload the rifle and pushed the safety off and the rifle fired. I know for sure my hand wasn't on the trigger. My hunting pack is made of a nylon like material and I don't think it caught on the trigger. I'm not saying that couldn't have happened. Please test the gun for me.

Thank you
