

Dear Sirs,

I have a Remington
700 30-06 deer rifle.

About 2 years ago I
was hunting deer and the
gun went off when I
was unloading it. And I've
never had a gun do
that before. There should
be some kind of testing
to make sure guns are
safe and don't go
off without pulling the
trigger

Sincerely Yours

PS. Gun is
early 60's
