

To Whom this may concern:

This is a brief explanation of the problem I am having with my gun. When I start to shoot (pull the trigger) the gun does not fire. When I lower the gun it fires off. This has happened on several occasions. One other time I pulled the trigger to fire but the gun wouldn't shoot, then I pointed the gun in the air, ejected the shell and when the chamber was closed back with another shell the gun fired on its own.

Thank You,
David Nicks
