

Dear Sir,

I recently called your office & talked with your representative about this Rem. Model 700. I told him about how it will fire without touching the trigger, sometimes it will fire when the safety is released, and sometimes it will fire when you work the bolt. I have had (3) frightening experiences with this rifle. Each time I had a so called competent gunsmith to "fix it". After the last incident, I gave up, it is too dangerous like it is. Please inform me if it can be properly repaired.

Respectfully,

Daniel C. Newsome
