

Nov. 12, 1998

Dear Sir,

The safety isn't working properly at times after putting the safety on & then releasing it the Rifle will sometimes fire. This also happens when I put the safety on & I just squeeze the trigger, then push the safety off, the Rifle sometimes will fire. Also sometimes I cock the Rifle & squeeze the trigger the Rifle doesn't fire at all. I would like the trigger adjusted to about $4\frac{1}{2}$ Lb. up & clean.

P.S. I really would like a ~~new~~ trigger & safety assembly, I don't trust the original ones. I purchased this Rifle around 1972. also ~~back~~ my head spring.

Thanks
