To Remington Repair Center

Quide

To Whom it may Concern.

I am sending you my gun . The model 700. To be checked out for Safety Switch Discharge.

This 700 model serial no. 6256471 has fired 3 times while taking the safety off. 2 times by myself and 1 time by a friend of mine. All three times the gun was pointed in a safe direction. No one was hurt. But I can say anyone standing around that area was shocked that the gun went off.

This first started more than 10 years ago. I purchased this gun through a friend of a friend. After the First Discharge, I took the gun down to Bullseye Shooting supply to have the gun checked out. The result were the trigger pull was to low(2pounds). I never took this gun and adjusted the trigger. I could only come with the person before me did it. The gun was now at 5pound pull on the trigger. The gun was not used till the following year. Out of the safe the following year to the firing range. Shoots Like a dream The most accurate gun I own. To Maine I go. After a couple days there. Everything is fine. The afternoon was over for that day. Once again as I went to unload it. BANG. The rest of the week I used my lever action.

That same week one of my friends wanted to borrow the gun so he could hunt with his boy's. I told him the problem I had and did not feel comfortable letting him use the gun. I let him use the gun. I was not with him when it went off. He said he never touched the trigger.

Like most hunting trips. When we get back to the camp we all ask if anyone saw or seen anything that might be worthy of hunting the next day. Not that night. It was about the gun going off. End result. You must of hit the trigger by accident.

I have not used the gun since. The last time I used this gun was in November of 2008.

I am sending this to you after talking to Paul Connolly of Bullseye Shooting Supply. In hope that this situation can be resolved. I do not feel comfortable carrying this gun around till something is done to make it safe.

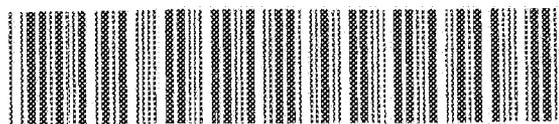

Thank you for your time.

Sincerely  
John Baker
