Hello, my name is David Bonner from North Carolina. I have an older Model 700 30-06 bolt action. It has a metal butt plate and although I am not the original owner, I believe it was probably made in the 1960's. While I was hunting several weeks ago I chambered a round and it did not feel like it went in smoothly. To make sure nothing was wrong I pushed the safety off to open the bolt and upon doing so the gun fired. Is there a fix to the problem with the <http://us.mg4.mail.yahoo.com/neo/launch>

12/15/2011

older safety system or is there something else I can do? I have had the gun for about 10 years and have never had any problems with it and love to carry it. Any info. you can provide would be appreciated!
