Re: Remington Model 700ADL Rifle; Serial No. 6584328

Dear Sir/Madam:

Enclosed is the above-referenced rifle for inspection. This rifle discharged on a recent hunting outing with my ten year old son. The discharge occurred without the trigger being pulled. Initially the gun would not fire, and then fired without the trigger being touched. Another shell was placed in the chamber and the gun <u>fired</u> immediately upon the safety being released. After removing all shells, the gun continued to snap when the safety was released.

The gun has now ceased to exhibit that problem. However, I have no intention of using this gun again. This gun has been well maintained and is in very good condition, considering its age. I do not believe that, under any conditions, this rifle should have discharged as described.

After inspecting the rifle, I would appreciated being contacted at the telephone number shown above to discuss disposition of this rifle.

I look forward to hearing from you.

Sincerely, Gary W. Coker

GWC/sb
