PS 34552

Dear Sirs,

Last deer season I tried to fire this gun at a buck and it wouldn't fire. I looked to make sure the safety was in the FIRE position and tried it again and it still wouldn't fire. I then pulled on the trigger as hard as I possibly could and the gun fired. So I took the gun to the shooting range and it fired OK many times.

A few weeks later I took it deer hunting again and this time after loading the gun I could not get the safety to move to the SAFE position. So I unbolted the bolt and unloaded gun, and while I had the gun unbolted I was able to move the safety to the SAFE position. ~~there~~ I then pushed the safety to the FIRE position and the gun fired without even pulling the trigger. I'm concerned about the safety and dependability of the safety and firing mechanism. Would you please check this gun for a mechanical problem. I would be willing to pay if necessary. Any help you can provide would be greatly appreciated. Thanks.

Howard G. Faught
