Arms Service Div. Remington Arms Co. Inc. Illion, New York 13357

Dear Sirs:

ECC

I am sending you my Remington Model 700 BDL custom deluxe in 280 remington cal. serial number c6659165.

The rifle discharged in my garage when I chambered a live round to check my bullet seating depth. I was fortunate this time and there were no injuries only stained boxer shorts. I could not unlock the bolt initially but rather had to cam it further in the close direction before the spent casing could be removed. In the box is the spent casing.

The rifle has always been very reliable in the past five years since I've owned it. It probably has less than 500 rounds through it. Some additional history that may or may not be important. Two months ago while Pig hunting I carried the rifle with a live round in the chamber and the safety on. At the end of the day I tried to fire the rifle, but it misfired. It dented the primer but failed to fire, I rechambered the round and it fired successfully. I may well have a ammo problem but I would feel better if the rifle was checked out by factory service people.

If repairs are needed, press on and send me the bill at the above address.

Thank you very much for your time.

Patric a Legg
