Steve Allen 314 W. River Rd. Ft. Edward, N.Y. 12828 (518) 747-5693

Remington Arms Company Inc. Arms Services Division- Repairs 14 Hoefler Avenue Ilion, N.Y. 13357

To Whom it may Concern:

This past fall, while sighting the gun in for deer season, I chambered the first round and a split second later the rifle fired, yet at no time had I touched the trigger. The gun discharged at the mere closing of the bolt. Thankfully, no one was hurt.

After emptying the firearm, I repeatedly worked the action, with the same results--whenever the bolt closed, the firing pin went off.

I returned the gun to my dealer who supposedly repaired the problem (allegedly a flaw with the trigger mechanism) and indeed, I had no trouble with the weapon during the '96 hunting season. However, three months after deer season, during which time the rifle has been locked up in the cabinet, I took out the gun and worked the bolt. As soon as the bolt closed, the firing pin went off. Obviously this problem is potentially lethal and cannot be tolerated.

As you will notice, the gun does not do this very often, but the fact that it has done it on a couple of occasions is enough for me to send it back to have it looked at and correct the problem.

Steve Allen
