SUBJECT OF EXPT.

H 720

 $\frac{7}{64} - \frac{18}{64}$

Deflection = .172

H 721

Assume S of 150,000

$$F = \frac{2SL^2}{3EH} \quad H = \frac{2SR^2}{3EE}$$

$$H = \frac{2(150,000)(1.625)^2}{3(3 \times 10^7) \cdot .172} = 0.44$$

$$P = \frac{1.625^2}{50 \cdot .01} = 5.31$$

$$P = \frac{Sbh^2}{6L} = \frac{150,000(375) \cdot .0018^2}{6(1.625)} = 9.6$$
