SUBJECT: POWDER METAL SAMPLES FOR M/721 BEAR

The sample bars of powdered metal iron that were sent in by the Bassick Company have been heat treated and tested. Results indicated a possible application for use in the M/721 Bear. In order to explore the heat treating possibilities further and to obtain more comprehensive information, we would like to have you procure fifty more sample pieces that duplicate the original three. If a charge is involved, advise and we will be glad to cover with our purchase order.
