X/100 - CUSTOMER COMPLAINTS

Fires on Safe - Follows down

Over three years ago, all guns in the above category began to be referred to S.E. & C. for examination and diagnosis. It began to be readily apparent that these guns were all the result of minimal Connector-Sear engagement.

In June of 1973, an operation was initiated making the adjustment on a comparator which assured a minimum engagement of .015"

It is my opinion that review of these guns, except in the case of Damaged Actions or Personal Injury guns, is no longer justified and should be discontinued.

*Does this present any problem to you*  
*Hehe*

*Not at all. We  
will stop sending  
to P.E.C. those types  
of complaints as of 1/2/74
