In preparing Part II request for Model 721, we should consider including the value of some 360 Barrels which the Plant advises had to be scrapped due to corrosion or other causes incidental to our trial runs. In requesting W. E. Davis to arrange to have someone give you the pertinent facts on this. In the same manner, it should include the value of other components, including those in the purchasing category which have had to be scrapped and charged to the project.
