ILION

FROM: G. O. CLIFFORD

SUBJECT: ARTICLE IN "PRODUCT ENGINEERING"
ON DESIGN OF MODEL 721 RIFLE

Please note attached letter from Lee Tolman to Henry Davis relative to the proposed article on the engineering features in the design of the Model 721 Rifle. It seems to us that we might very well work up an article for Product Engineering which would give Remington some very good publicity, basing the article on the engineering problems in the design of the Model 721 Rifle. We naturally do not want to use information which would give aid and comfort to a competitor but believe that it would be interesting to point out the engineering features of the product design itself and avoid any emphasis on the novel or unconventional production processes which might be used.

Will you see if you or someone else at Ilion would be able to draft up a proposed article which would be suitable.
