MODEL 721 IMPROVEMENTS

The Arms Development Schedule anticipates major changes to the Models 721, 722 and 723. We have been tentatively designating the proposed new work as M/TCO.

In talking with J.D. Grammond today and also as learned during my last visit to Bridgeport, the Sales Department appears to be reasonably certain of wanting to retain the designation "Model 721" for the new center fire bolt action line rather than use some new number. This would also anticipate dropping use of 722 and 723. This is also based on understanding that the Ilion Plant will be able to accommodate this from standpoint of parts service.
