MODEL XP-700 CENTER FIRE PISTOL

With further reference to our letter of January 11th, am enclosing herewith a print of our Dwg. LA-503 - Chamber - 222 Rem. Short Mag. Also enclosed is a detail drawing showing dimensions which I believe were used for making up the cartridge cases which were fired in connection with the pistol development.

We are very sorry that these prints have been delayed; apparently due to a local misunderstanding, as to means of getting them to you. At this time the Plant is anxious to start procurement of their barrel tooling and are pressing us for release of the chamber drawing. Therefore, anything that might be done to help to recover on the delay will certainly be appreciated.
