H. J. HACKMAN

MODELS 40X and 700 BOLT ACTION RIFLES

In reviewing the Custom Shop operations with M.H. Walker there appears to be an opportunity of picking up a number of items as effect quality or cost of materials. It seems that where variations are disclosed or encountered the conditions are properly reviewed and considered with Plant personnel. However, since a few of these are repetitious it is possible that some further work may be justified to improve the operations involved in the plant.

I have therefore proposed to "Mike" that he consider making a summary of these items for purpose of your arranging for a future review and discussion in effort to work towards a better condition during the coming year. As soon as he has this ready we will let you know.
