Gent Lemen:

A STATE OF THE STA

Have recently aquired XP-100 Ser. 4540 W/Bushnell Phantom 1.3X scope, with the express purpose or conducting experimental research in long-range shooting.

Would greatly appreciate information as to the experience of other shooters using the XP-100 at long ranges; this may save some time and money, otherwise will have to start at scratch; it may also serve as a means of comparing results with other shooters. Have reason to feel that the XP-100 equipped with high-power scope may develope data of an interesting nature at extra-long rifle range.

As enclosing my only file copy of article published regards experiments along similar lines; please return the magazine as soon as possible.

Very truly tours,

Proposition
