MODEL 700 BDL - FLOOR PLATE FINISH

Here is another request to do something about the above. Last week Harvey agreed to handle the two reports received from "Pete" Morgan, and possibly consider "Micabond" added (as for "C" grade). However, Walker now tells me that "Micabond" is not the answer. He had been led to believe that ESD would investigate a vapor deposition --- but apparently has not been accomplished.

If you "give the word" we can try to do something. Since already an established model, it would seem irregular for R&D to initiate this action.
