Accuracy of .222 Remington "Power-Lokt" Bullets
in Model 700 Rifles

"Power-Lokt" bullets are more accurate than conventional SP bullets when fired in Model 700 rifles.

To fully evaluate the capabilities of the guns I fired them:

- o as received, fitted with a 24X Unertl scope.
- o as received, fitted with 8X Bolvar scope.
- o by removing the existing stock and substituting a 40X stock:

The 100 yard accuracy results of five 5-shot groups are:

	<u>Model 700 Rifle #100</u>				<u>Model 700 Rifle #495</u>	
	<u>24X Unertl Scope</u>		<u>8X Bolvar</u>		<u>24X Unertl Scope</u>	
	<u>As Rec'd</u>	<u>40X Stock</u>	<u>As Rec'd</u>	<u>40X Stock</u>	<u>As Rec'd</u>	<u>40X Stock</u>
"Power-Lokt"	1.37	.953	1.4	1.24	1.23	1.23
Conventional SP	1.82	2.21	2.06	1.45	2.06	1.63
