Enclosed is a photo of my XP 100 which I have made into a 444 Mag. I am using the 444 marlin case with 240 gr bullet and 46 gr of 2400 powder and am getting 2300 fps. It penetrates 3/8" steel at 50 yds and leaves a hole big enough to stick your thumb through. I am using a Sharon barrel, same bolt modified with a mauser extractor and weight is approx 4 lbs. It is quite comfortable to shoot considering the load but you have to use ear protection.

P.S. Shoots 1 1/2" groups at 50yds.

Thought that you might be interested.
