Test

MODEL 700 - Cal. 222 Rem. Mag.

On August 14th one Model 700 - 222 Rem. Magnum caliber was withdrawn from warehouse for purpose of comparison test with one Vorere Model 2120.

During routine measurements test, the following observations were made:

1. Trigger pull was out of specs by an average of 1 pound (over).
2. Upper screw hole for rear sight was poorly threaded.
3. Very poor finish on bolt.
4. Poor finish on stock. Would not be accepted by Quality Audit Group (per W. Scanlon).

Since it was felt that the scope block would not hold for accuracy testing, another M/700 was withdrawn from warehouse to complete test.
