Herb Albaugh is pressing for a clearance on a change to Model 660 fire control aimed to eliminate the problem of "follow-down". We have had design all finished and experimental parts assembled into guns, and Kelly arranged with Bill Best to have put through regular quality audit test before release. I have asked Bill to get this for us promptly.

Apparently this is an item that Herb is supposed to report back to Jack McAndrews on the timing. I told him we would alert you folks but I would not like to make commitment on exact date would be in effect after release.
