

REMINGTON MODEL 700 & VARMIN'T
INSTRUCTION FOLDER INTRODUCTION

The Remington Model 700 is a high quality bolt action repeater available in a wide variety of center fire calibers. Two grades are supplied ... ADL (Standard) and BDL.

Both grades offer a superbly balanced, full length stock with the added comfort of a cheekpiece and Monte Carlo comb. A fore-end tip, grip cap and attractive white spacers accentuate the BDL. Fine custom checkering has been applied to both grades and the entire stock has been protected and beautified by the super tough Du Pont RK-W finish.

The Remington Model 700 Varmint is an extremely accurate rifle expressly designed to handle the high velocity "Varmint" calibers. In addition to the Model 700 BDL grade items, this rifle features a heavy weight, target-type barrel, equipped with front and rear bases for top mounting of telescope sights for long range varmint or target shooting. Tapped holes are provided in the receiver for sight mountings. These holes are filled with receiver plug screws. The conventional iron type front sight has been eliminated to prevent interference with telescope sighting and to provide a clean appearing barrel.
