

Dear Mr. Jack:

10-26-69

Enclosed is a self-addressed, stamped envelope.

I would like the following information.

Can you make a target type micrometer (click) adjustments near sight for the X-P-100 pistol, also a different height for a front sight if required.

I realized that a scope is best, but I also want a back up sighting system.

I have noticed that after I fire several rounds, the forward portion of the stock will warp away from the barrel. After I have stopped shooting, the stock returns to its original position. What can I do to correct this?

I would also like to know the formula for calculating the speed of rotation (R.P.M. or R.P.S.) of a bullet.

Thank You

Regards

Alexander Gadbois
