Bridgeport, Connecticut
March 13, 1973

TO: A. D. KERR

FROM: F. E. MORGAN

The attached letter to E. F. Barrett from N.S. Wilson dated March 12 is self-explanatory.

The theme of the letter of course, indicates police interest in our Model 700 heavy barrel varmint chambered for the 308 caliber. In view of the foregoing, what volume of unit sales would be required to produce the 700 BDL varmint in 308 caliber.

When we receive this information from you, we will ask both Government Sales and Red Sherman to forecast annual volumes.

F. E. Morgan

3/19/73 We have produced the 700 varmint in 308 caliber/RA 155 steel. It would require nothing new to produce this barrel since we presently carry it in our P/R. It would have to be produced on #4 GFM.

out { To produce the 40XB in 308 we would require development of GFM Form Templates and pre-GFM turn templates. If we didn't produce to a form, we could produce a straight blank which Gogo! would have to machine down in his turn operation.

The Marines are currently talking about a 40XB in 308 which is more difficult to produce.
