Attached is info on computer program for plotting schedules on design programs. Charlie Hand did the work and can provide any additional info you may need. I have a manual on the general "Critical Path Scheduling" program. Essentially all you need do is fill in the columns estimating work days required for each event and what events must be completed ~~before~~ first (prerequisite). Program will plot schedule. However,

"SAFETY RULES ARE PERFECT TOOLS" (over)

I have not used the program yet. As a trial, please apply this to the Model Seven Project ASAP! If program works well, we will follow up with all other major projects.
