

Stock/Exterior Components

This stock is made of American walnut and has cut checkering on the pistol grip and forearm. A black spacer is used with a red rubber butt pad originally made by BEEBE. The stock also has a black grip cap with insert bearing the Ruger logo and two swivel studs.

No re-enforcement stud or screw is used in the stock just behind the recoil lug inletting. Bedding of the barrel is as machined, while the top reference surface is not destroyed on the finished stock. (Photo #12)
