

Smith & Wesson

Barrel/Receiver

Barrel and receiver assembly is a two piece design, with the barrel screwed into the receiver. The barrel has no provisions for any type of sights, however, the receiver is drilled and tapped for scope mounts. There is one gas vent hole in the left side of the receiver in the lug way area and the recoil lug is integral with the receiver. (See Photo #1)

The bolt stop is located on the left side of the receiver tang. It must be pressed down to remove the bolt but does not have to be touched on insertion. (Photo #1)
