Subject: TLW9075B - Continuation

I've wired another stock for jar-off/drop/rotation testing of trigger #5. I reset the trigger pull back to 2 lbs (2.065 to be exact) and added a pull locking screw. The trigger and trigger assembly are in action #2217 (it was A-14 in a previous life) in the drop room. I need the following done:
measure trigger pull, engagement, and overtravel on the trigger assembly
complete extended SAAMI testing doing jar-off, followed by rotation, followed by drop
verify that the trigger pivot pin hasn't moved after each drop
remeasure trigger pull, engagement, and overtravel after testing is complete

The action (#2217) is a 22-250 Rem.
