

John Hill

John Hill asked if we
were going to require a new
manual for the M 733 when
the new Safety Assembly is
added to the line

John

Fandy:

Check this out with
Ron Smithson. Also I will
check with Clark.

Sam M.

Jim

Ron will check with G. Jackson Monday to get estimate of manuals on hand. Normally a small change like this is made before the next printing unless the plant chooses to scrap any manuals on the floor. Ron needs 2 weeks to get new manuals in from the time we tell him to "go".

Ron.

Are there any other changes planned for this manual?

- 20,000 Manuals on hand - probably won't need any till the first of the year. as per George Jackson
