Mr. Spencer Bennett
Remington Arms Co. Inc.
Ilion, NY 13357

Dear Spencer:

After 25 years as a toolmaker, tooling engineer and product manager for Tool Products Company of Minneapolis, I recently left to start my own company. With great pride, I want to personally introduce you to Product Technologies, Inc.

Product Technologies focuses on the development phases of precision component parts manufacturing. We specialize in:

- Complete design engineering services, including consultation, drawings and dimensioning
- Tooling design, gauging and construction
- Die casting and plastic mold design and construction
- Machine prototypes from solid bar stock; fully machined, plaster molded prototypes of aluminum castings; and single cavity prototype die cast dies and castings
- Pilot production runs

I always have supported the idea that attention to detail at the pre-production stages of precision parts manufacturing makes for cost-effective components that work in the long run. Over the years, I have seen this reasoning proved true time and time again. As the manufacturing world's need for precision parts continues to grow, I am strongly convinced that Product Technologies' services are especially valuable to OEMs and volume producers.

As of March 15, Product Technologies is fully operational. We look forward to a relationship with you that is mutually beneficial.

Best regards,

John Rivers
