

TEST AND MEASUREMENT LAB TEST RESULTS

REQUESTER: I. McCormick
REPORT NO.: BB2448
WRITTEN BY: D. Thomas
TEST TYPE: Developmental

TESTER: D.T.R.H. DATE: 9/12/88
WORK ORDER NO.: 018488

FIREARM STAT'S : MODEL: 700 with experimental Barrel CAL or GAUGE: .458
BARREL TYPE: PROOFED: YES NO

REASON FOR TEST :

To determine if the experimental barrel with a $\frac{1}{4}$ inch rib brazed into a slot over the chamber can survive a high Pressure STrength Test.

EQUIPMENT REQUIRED :

- 1 experimental barreled action
- reloading equipment
- Iron Lung
- Strain gage equipment

TEST PROCEDURE :

The barrel was plugged with 4- 510gn, .458 in dia. bullets. A strain gage was applied in the chamber area to determine Peak Pressure. The gun was then installed in the iron lung and a high pressure round was fired in it. The destructive round consisted of 80gn of Win 296 Powder and a 510gn soft point bullet loaded in a win Case & Primer.

TEST RESULTS :

The barrel burst in the chamber area. The brass color in the cross sectional area of the slot shows that the failure started there.
