MODEL 700 AS BDL (ARYLON STOCK) - VERDURA, LEWIS

In 1969 Remington will offer the Model 700 BDL fitted with a stock made of Duxont Arylon. This will mark the first time that Arylon has been used as a viable material for a gun stock. This version of the Model 700 will replace the Rynite and right hand fiberglass stocks currently in the product line. It will be produced in long and short action versions as well as in regular, magnum and varmint barrel configurations in the following calibers:

- | | |
|--------------|---------------|
| o 22-250 REM | o 308 WIN |
| o 243 WIN | o 7mm REM MAG |
| o 270 WIN | o 280 REM |
| o 30-06 S&W | |

Initial production is scheduled for March 1969 in 22-250 REM caliber. All paperwork has been completed.

A formal trial and pilot is not required on this item but the Test and Measurement Lab may want to draw a sample from the first production run and verify that it conforms to Model 700 specifications.

MODEL 700 CLASSIC .300 WEATHERBY MAGNUM - Lewis/Verdura

The 1989 offering in the Model 700 Classic series will be the 300 Weatherby Magnum. This will be a synergistic offering from both Firearms and Ammunition.

All paperwork is in place and all tooling is reported to be available.

Total volume for this offering has been estimated at 6000 units to be produced in June. The trial and pilot run will consist of 350 guns scheduled for warehousing in March. This is to try and comply with a Marketing request that 300-500 guns be made available for the Alaskan bear season in March if possible.
