SUBJECT: M/700 ENHANCEMENTS

The following is a listing of potential product features that would add value to our current M/700 offering. The addition of these features is important to maintaining high consumer demand for our product in today's competitive market.

Please review this list with respect to feasibility, cost and timing. If reasonable, some of these items would be added to the M/700 line in 1995.

- o Re-styled BDL stock
- o Solid recoil pad on all versions except M/700 ADL. These pads would be similar to the 90T in hardness, pad thickness would vary based on stock configuration.
- o Releasable bolt lock with two position safety
- o Consumer adjustable trigger pull (within fixed limits)
- o Accuracy enhancement mechanism
