Clint,
I am preparing a CAR for an externally adjustable X-Mark Pro fire control.
The new design will feature a new trigger and new rear spacer from PMPD.
The processing steps for the new parts will require 5 drill presses in total.
The trigger operations will require 2 power feed drill operations in one unit.
Additionally there will be a second unit with 2 manual spindles.
The rear spacer operation can be accomplished with 1 power feed drill unit.

I have contacted several sources for the price of new equipment. We made a similar purchase
For the XMP work cell in building 84-2 in the first quarter of 2006. The inventory tags on those drills
Units are I42069 and I42070. I need a budgetary estimate on installing the new equipment, ie. plumbing, electrical
and crafts.

All drill heads will require coolant. Can you provide a price for 3 small coolant tanks as well?

Call me if you have any questions, I'll need the numbers by next Thursday, 2-28.

Chris,
Will we be putting this equipment in 84-2 across the isle from the Blohm and Chevalier?

Thanks
