

Typical LE firearms/product questions which you may be asked:

Q: Are LE firearms restricted to LE only sales, or can I buy one?

A: If you are a lawful buyer of firearms as certified by Federal Law, and can find a LE distributor/dealer in your area or otherwise who will order one for you, then you may be able to purchase one.

Q: Can I buy one (a LE firearm) from you?

A: We do not sell firearms to the general public; we only sell to our Wholesalers & Distributors.

Q: Why doesn't the Golden Saber bullet have a cannelure (crimping ring) around the bullet?

A: The Golden Saber bullets have been specially designed without one because they are loaded with a slight taper crimp, and this is enough to keep them properly seated within the brass cartridge casing. Also, they are made with a unique "Driving Band" that helps them to fully engage the rifling at the rear of the bullet improving performance.

Q: Can I put an 870 Police shotgun stock on my Model 870 Express/Wingmaster, and can I get it from you?

A: Yes, provided that we have it in stock, and I will need the serial # of your gun to check and see exactly what type of gun you have (ex. 12 ga. or 20 ga. etc.).

Q: Can I put an 870 Police shotgun bbl on my Model 870 Express/Wingmaster, and can I get it from you?

A: Federal law states that civilians (persons without a special firearms license) cannot own a shotgun with a bbl less than 18" in length. However, if you wish to purchase any bbl at or over this acceptable length, I can check parts availability and see if we have one for your gauge/model (ask for serial #).

Q: What is the difference between a Model 870 Express Synthetic, and a Model 870 Police Shotgun?

A: The 870 Police shotguns have the machining burrs removed via a hand sanding process on the internal components, receiver, and barrel, (just like the Wingmaster), then the parts are Parkerized for corrosion protection. The 870 P's have a heavy duty sear spring that requires 7-8 lbs to compress, whereas standard sear springs in 870 Express guns have a 4.5-6 lbs sear spring.

Also, the 870 Police Shotguns are specialized in different configurations for tactical police duty use, such as "Ghost Ring" sights, Tritium sights, SpeedFeed stocks, folding stocks, short 10-14" bbls, etc.

The 870 Express guns have the machining burrs removed via a glass blasting process on the internal components, receiver, and barrel, which leaves a rough surface in which the black oxide (bluing) is applied to the parts.

Q: What is the difference between a regular Model 700 (such as a Model 700 SPS) and a Model 700 P (rifle)?

A: The standard Model 700P features an H-S Precision® composite stock reinforced with Du Pont Kevlar and fiberglass. Available 40-X adjustable trigger. They'll stay dimensionally stable in any weather and under the worst tactical situations. The stock is laid up around an aircraft-grade aluminum bedding block that runs up the entire length of the receiver. Heavy free floating 26" bbl, receiver machined from Ordinance grade steel. It has a textured, black, non-reflective finish and comes with sling swivel studs. The Standard Model 700P is available in time-tested .223 Rem, .308 Win., .300 Win Mag, 7mm Remington Mag., and .300 Remington Ultra Mag cartridges.

A Model 700 SPS has a black synthetic (Nylon type) stock and it does not feature any type of bedding block. The Model 700 SPS features an improved, ergonomically designed synthetic stock for better handling and enhanced overall functionality. The carbon steel barrels are clean without sights and receivers are drilled and tapped for scope mounts. All exterior metalwork features a matte blued finish. Standard amenities also include the revolutionary recoil-reducing R3® recoil pad, a hinged floor plate magazine, and swivel studs.

Q: What is the difference between the Model 7600 and the Model 7615 (pump action rifle)?

A: The Metal work and stock have a black matte non-reflective finish, and the butt stock is furnished with a black rubber recoil pad. Like its walnut-stocked brother, the 7600™ Synthetic has twin action bars for smooth cycling; a quick-release, drop-out four-round magazine; and a free-floated barrel that matches the accuracy of the best bolt guns. Walnut (wood) stocked models have a high gloss blued finish on the bbl and receiver.

The Model 7615P Pump rifle, based on the rugged and reliable Model 870 shotgun, delivers first shot accuracy and ultra-fast follow-up shots as the shooter instantly chambers another round from the higher capacity magazine. The Model 7615P comes in .223 Remington caliber, uses standard M16/AR15 style magazines and has a 16 1/2" barrel. Also, transition from the Model 870 Pump shotgun into this patrol rifle is easily accomplished.

- Available in standard rifle sight or Wilson Combat / XS Sight Company sighting systems.
- Speedfeed Stocks are used on most of the models but we also now include the AR collapsible style stock from Advanced Technologies. Be it Standard or Pistol Grip Stocks, they are available in 13" and 14" Length of Pull (LOP).
- All 7615's are supplied with a "low profile" 10 round M16/AR-15 style magazine.
- The 7615's provided to the **5.11 Challenge** performed flawlessly all summer and will be featured again in the 2006 Challenge.
- Rotary Bolt Lock-up Design for exceptional strength, safety and hallmark reliability.
- Parkerized Finish and Rugged, Black Synthetic Stock and Fore-end with sling swivel studs.

Q: What is the difference between the Model 40-X (police) and the M-24 (rifle)?

A: The Model 40-XB & 40-XS bolt-action rifles. Serving as the basic action design from which today's legendary Remington Model 700 Bolt-Action rifle was born, the Model 40-X has always been there when pinpoint accuracy matters most.

Our line of law enforcement centerfire rifles is rounded out by the exceptional Model 40-XB Tactical and the Model 40-XS. Arguably the most accurate bolt action rifle available today, it's completely handcrafted and made to order in the Remington Custom Shop.

Both models feature a glass-bedded action in a McMillan A3 or A5 series stock with adjustable LOP and comb height, with a free-floating 416 stainless steel barrel. A thermoset epoxy finish on the receiver and barrel (as on the M-24 rifle) is also available. Also has an externally adjustable trigger.

Every Model 40-XS tactical rifle comes from the Custom Shop with a test target and verification of the ammo used. Proved capable of delivering $\frac{3}{4}$ " MOA accuracy or better before each rifle leaves the Remington Custom Shop.

M-24---Designed for and used by the United States Military, the M24's popularity also stretches from SWAT teams nationwide to International Military and Government agencies. Based on Remington's legendary Model 700™ and 40-X™ rifles, famous for their "out of the box" accuracy, the M24 has quickly gained a reputation for precision among the sniper system community. An essential element in the M-24's accuracy is its heavy, hammer-forged, stainless steel, Rem-Tough powder-coated barrel. The barrel's unique 5-R rifling delivers combined advantages of reduced bullet deformation and metallic fouling, even pressure curves, higher bullet velocities and longer barrel accuracy life. The M-24's H-S Precision® aramid fiber-reinforced, fiberglass stock with an aluminum bedding block, is utilized for exceptional strength and dimensional stability in all weather conditions. Combined with its sophisticated sighting options, the M-24's Sniper Weapon System remains the standard against which all sniper systems are compared.
