My rifle has miss fired three times ove the years.

What happens is you load the rifle and put the safety on and when you take the safety off and pull the trigger nothing happens. the safety will come off firing position and when you release the bolt and put it back in place the rigle will auto fire and you better be hanging on to it. You can't get it to do it again for a while do you know what is going on the number on the gun is B6493868 it is a 270 Remington Model 700

thanks,

Garry Evans
