CUTTING EDGE LOOKS, LEGENDARY MODEL 700
PERFORMANCE

Remington® Introduces the New Model 700 Xtreme Hunting Rifle (XHR)

Madison, NC –The Model 700 bolt-action has long been the preferred centerfire rifle of choice by small game, predator and trophy hunters alike. Combining cutting edge technology and looks while still delivering the legendary accuracy and reliability that the Model 700 reputation has built upon since its introduction in 1962, Remington is proud to introduce the new Xtreme Hunting Rifle (XHR).

For starters, the Model 700 XHR is fit with a unique patent pending triangular contoured barrel. Remington introduced the VTR (Varmint Target Rifle) barrel in 2008, and now has expanded the triangular fluting in a big-game hunting configuration. This is a result of rigorous research and development that is focused on reducing weight, enhancing rigidity and promoting rapid heat dissipation. The Model 700 Features a 22" barrel on standard calibers, a 24" barrel on standard and belted magnums, and a 26" barrel on Remington Ultra Mag chamberings. All XHR barrels are counter-bored at the muzzle for ultimate crown protection.

At the core of this rifle is the rigid Model 700 receiver, machined from a solid steel bar. This, combined with the famous "three-rings-of-steel" design which completely surrounds the cartridge head, makes the Model 700 one of the strongest and most accurate rifles available. With this solid construction and advanced design, the Model 700 has earned a reputation for its out-of-the-box accuracy.

This durable action is then housed in a Remington synthetic stock featuring in Realtree® AP HD camo and Hogue® rubberized grip panels fitted with Remington's patented SuperCell® Recoil Pad. The Remington SuperCell recoil pad is the product of a decade of research and development by Remington's top recoil-suppression experts. The recoil pad utilizes a complete matrix of millions of proprietary Polyurethane "SuperCells" to harness and release energy over a much longer time period, resulting in dramatically reduced felt recoil.

The Model 700 XHR are equipped with the new X-MARK PRO Adjustable trigger which operates like the current Remington fire control and features a safety that blocks the sear and trigger. The advanced design allows for 3 ½ pound trigger pull set directly from the factory. The X-MARK PRO Adjustable trigger can be externally adjusted up to

2 pounds of range with included tool. (Remington recommends trigger pull weights above 3 pounds)
