**Updated Remington® Model 700™ Titanium Gets a New Look  
and Name – the Model 700 Alaskan Ti**

**Madison, NC** – In 2001, Remington revolutionized the world of production rifles when we introduced the Model 700 Titanium Ultimate Lightweight bolt-action rifle - the lightest production rifle on the market, rivaling custom rifles at a fraction of the cost. For 2007, the Model 700 Titanium gets an updated style, enhanced features and a new name – the **Model 700 Alaskan Ti**, available in nine versatile hunting calibers ranging from the medium range 7mm-08 Rem to the full-power .300 Win Mag. It is incredibly strong, impervious to the weather and amazingly accurate; and it weighs a mere 6 pounds!

At the core of the Model 700 Alaskan Ti is the strong, yet lightweight, receiver milled out of a solid block of Titanium. Spiral flutes are added on the bolt body and the bolt handle is skeletonized to remove additional weight while increasing bolt rigidity and cycling capabilities. And with all the great features of the legendary Model 700 bolt-action platform, this rifle offers the dependability and “out-of-the-box” accuracy that hunters and shooters have come to expect.

The addition of several new features to the Model 700 Alaskan Ti enhances performance, durability and updates its look. The new Remington X-MARK PRO™ trigger helps to deliver extraordinary accuracy with a trigger that breaks like glass, has virtually no creep and comes with up to 40% lower factory set pull weight. The clean 24-inch magnum contour barrel with Light Varmint style fluting is constructed of durable 416 stainless steel. The longer barrel length optimizes velocities while the fluting reduces weight and improves heat dissipation. The magnum contour barrel with fluting provides for magnum caliber chamberings (not previously available in the Model 700 Titanium) without adding significant weight. The barreled action is pillar bedded into a rugged Bell & Carlson carbon fiber synthetic stock, enhanced with a black and gray webbed paint scheme. This well-designed stock also features the new MaxxGuard™ protective coating which provides a soft touch, easy-grip finish for solid-handling in even the harshest weather conditions. Also new for 2007 is the addition of a hinged floorplate magazine with four-round magazine capacity in the short and long action calibers and three-round capacity in the magnum offerings. Completing this high tech package is the addition of sling swivel studs; receiver drilled and tapped for scope mounts; and revolutionary R3® Recoil Pad which significantly lessens recoil in this lightweight rifle.

Getting to the top of that mountain won't be as difficult with the amazingly lightweight and durable Model 700 Alaskan Ti. Getting your trophy won't be either.

The **Model 700 Alaskan Ti** rifle is available in 7mm-08 Rem, .25-06 Rem, .270 Win, .280 Rem, .30-06 Sprg, .270 WSM, .300 WSM, 7mm Rem Mag and .300 Win Mag at suggested retail prices ranging from \$2105 to \$2225. Visit our web site at [www.remington.com](http://www.remington.com) for a complete listing of Model 700 specialty, high performance rifles.
