Remington Military Products Division Introduces the Model 700™ Light Tactical Rifle Chambered in 6.8mm Rem SPC

Madison, NC – Introduced in 1998, the Model 700 Light Tactical Rifle (LTR) was designed to provide law enforcement and military personnel with a more portable, lighter weight version of the widely used Model 700 bolt action rifle. For 2005, the Remington Military Products Division is introducing the **Model 700 LTR** chambered in the highly efficient 6.8mm Remington Special Purpose Cartridge (SPC).

Features of the **Model 700 LTR** include a 20-inch fluted, hammer-forged match barrel; a graphite stock reinforced with aramid fiber; aluminum bedding block and the time proven Remington® Model 700 action and trigger assembly. The internal magazine has a four round capacity in the 6.8mm chambering.

The recently introduced 6.8mm Remington Special Purpose Cartridge, developed in conjunction with the military, provides less recoil than 7.62mm systems and increased lethality over standard 5.56mm systems while delivering exceptional accuracy.

Remington Military Products Division continues to work diligently to provide highly effective firearms tools for the defense of our nation. The **Model 700 LTR** chambered in 6.8mm provides a lightweight, highly portable precision weapons system ideally suited for military law enforcement duties and civil military applications.
