

SPORTSMAN-58 ACTION OPENING

Under the report of 12 gage status, several improvement items were covered which produce a more uniform action from gun to gun and in a minor way reduce opening force. Other changes to finishes on the Hammer and Slide are being considered.

The basic opening force is controlled by the Action Spring. Design indicated that all tests indicate that the spring weight as now specified produces the best functioning gun. To lighten the spring further would result in failure to close malfunctions.
