

Common Sight Line Stock

Through a misunderstanding, it was reported in the minutes of the last meeting that at the time of adoption of the common sight line stock it was desired to introduce a hooded front sight in Models 721 and 722. Recognizing that this would introduce serious problems in production and would increase costs substantially, Sales is not requesting that this change be made. To prevent further misunderstanding, the Ilion Plant prepared a chart (attached) showing the main features of the proposed versions of the Models 740-760, Models 721-722, and Model 725. The committee agreed that the Plant should go ahead with the project on the basis of this program.

As promised at the last meeting, Sales submitted the following forecast. (See note below.)

	Calendar Year 1957	1958*	1958**
M/721-722	22,500	20,000	18,000
M/760	30,000	40,000	36,000
M/740	47,000	50,000	45,000
Total	99,500	110,000	99,000

* Anticipates common sight line stock
 ** Without common sight line stock

NOTE: The Sales Department later revised this forecast, as follows:

M/721-722	22,500	20,000	18,000
M/760	30,000	30,000	26,000
M/740	47,000	50,000	45,000
Total	99,500	100,000	89,000

RIM FIRE RIFLESCOLOR MASTER LINE

The Sales Department does not desire special marking on the gun identifying the Color Master line. The marking will be the same as that on regular Model 572s.
