FIREARMS

SHOTGUNS

MODEL 58 - 5 SHOT AUTOLOADERS

This item is in development with final design and appearance samples yet to be approved. Scheduled date for announcement is January, 1963.

First tests of functional prototypes indicate need for gas system design revision, to prevent early action opening. While this design problem is considered correctable, its existence mitigates against any acceleration of current Development Schedule dates.

The Research & Development Department requests Sales Department opinion on elimination of the load selector planned for this item, on the basis that maladjustment of the load selector by a shooter might subject the shotgun action to extreme stress. There is a good possibility that the load
