Dear Sir,

Just a few lines to say hello
and hope this finds you all well.

Sir, why I am writing is
because I bought a new 30-06
Remington Rifle Model 700
serial no. A6419958. While I
was hunting deer this year I
got cold and came to the house
to warm-. As I entered the yard
I went to unload my rifle.

You have to push the safety button
on fire to open the bolt. to reject
the shell. Thank goodness there
was no one around, because as
soon as I pushed the safety button
up on fire to get my shell out of
the barrel, it went off. I did not
touch the trigger. it scared the
day lights and the bullet
went into the ground around
two feet in front of me. Sir I have
talked to several people at the
sport shop. They say other people
has said the same. Not only 30-06
