

SHOTGUNS - contd.CBC - BREAK-ACTION SINGLE BARREL SHOTGUN - contd.

In field testing the five (5) guns, one (1) had three (3) misfires in one hundred (100) rounds. Also, all of these guns seemed to shoot low. Point-of-impact for one gun was 14" low while other guns were not so far off.

Comments were made on the packaging as being inadequate for re-shipment by distributors. This assumes that initial shipments would be made in the ten (10) gun lot which are in wood boxes. Test parcel post shipments to Bridgeport with only additional taping of the ends was recommended.

The CBC gun Barrels are not presently marked as to choke. It was felt that this should be done. 83

Five (5) guns as received were taken to Bridgeport for Marketing analysis.

R & D is completing the test and will issue a summary report.

Committee Action

R & D is to complete the testing and issue the summary report. The president of CBC is to visit the United States in the near future. The report and action to be taken is to be reviewed by Marketing.

R & D is to determine the corrective action that can be taken to correct indent and point-of-impact. Also the cost to correct the one hundred (100) sample guns is to be estimated. No action is to be taken until after the review with the CBC president.

Shipment of guns for field evaluation in the United States and Canada should be held until the program has been resolved.
